

# Improving your Research Presentation

Organizing Your Talk: Kendra Redmond

A white ceramic cup filled with dark espresso coffee sits on a matching white saucer. The cup is positioned on the left side of the frame. The background is a dense field of dark brown coffee beans, creating a textured, organic backdrop. The lighting is soft, highlighting the smooth surface of the cup and the rich color of the coffee.

*A good  
presentation is  
like a good shot  
of espresso*

-Jim Endicott

# SOME HISTORY

1960s CP Violation BARYOGENESIS

1970s Quarks/Std Model

→ FALL OF HADRON WALL  
COSMOLOGY RENAISSANCE

1980s BSM Ideas DARK MATTER CANDIDATES INFLATION

1990s Neutrino Mass

→ → THE NEW COSMOLOGY  
⇒ EVIDENCE FOR "NEW PHYSICS"  
& NEW QUESTIONS

THAT CHART EXPLAINED THE QUANTUM HALL EFFECT. NOW, IF YOU'LL BEAR WITH ME FOR A MOMENT, THIS NEXT GRAPH SHOWS RAINFALL OVER THE AMAZON BASIN...

What's your message?

IF YOU KEEP SAYING "BEAR WITH ME FOR A MOMENT", PEOPLE TAKE A WHILE TO FIGURE OUT THAT YOU'RE JUST SHOWING THEM RANDOM SLIDES.

Goal

## Take-home messages

(1) \_\_\_\_\_

(2) \_\_\_\_\_

(3) \_\_\_\_\_

Goal

## I. Outlines are

- a. Essential for planning a good talk
- b. Worth the trouble
- c. Not as boring as you think

## II. For short talks

- a. You may not need to
- b. Display your outline because
- c. They can lead to awkward pauses

## III. And

- a. They may not be necessary if your
- b. Talk follows a logical progression

## TACO SHELL LOOFA

- IV. Zooming In / Zooming Out
- V. On Equations
- VI. Know your Audience

# A Sequence of Practice & Revision

- A Possible Schedule of Presentation / Revision
  - Aloud by yourself
  - To a fellow student, who understands the work
  - If possible, with your research supervisor
  - To a fellow student, not in the field
  - If possible, with your supervisor and students

# A Sequence of Practice / Revision

- After each presentation, seek out feedback; e.g.
  - What did the audience take to be your main points?
  - What did your audience find most effective?
  - What did your audience not understand?
  - About what did your audience want to know more?
  - What did your audience (especially your supervisor) think might not be accurate?
  - What did your audience think wasn't really necessary?
- Use your feedback to improve the presentation

- II. A Sequence of Practice & Revision
- III. Concrete Visualization/Demonstration
- IV. Zooming In / Zooming Out
- V. On Equations
- VI. Know your Audience

# On Equations

- The amount of time that an equation should appear on the screen is inversely proportional to the density of symbols it contains.

# On Equations

$$F = -kx$$

$$F = -kx - bv$$

$$F = -kx + \underline{\alpha}x^2 - bv$$

# Fractal Dimension

# Covers 2 Points

# Covers 4 Points

$N \propto R^1$ ; Dimension = 1

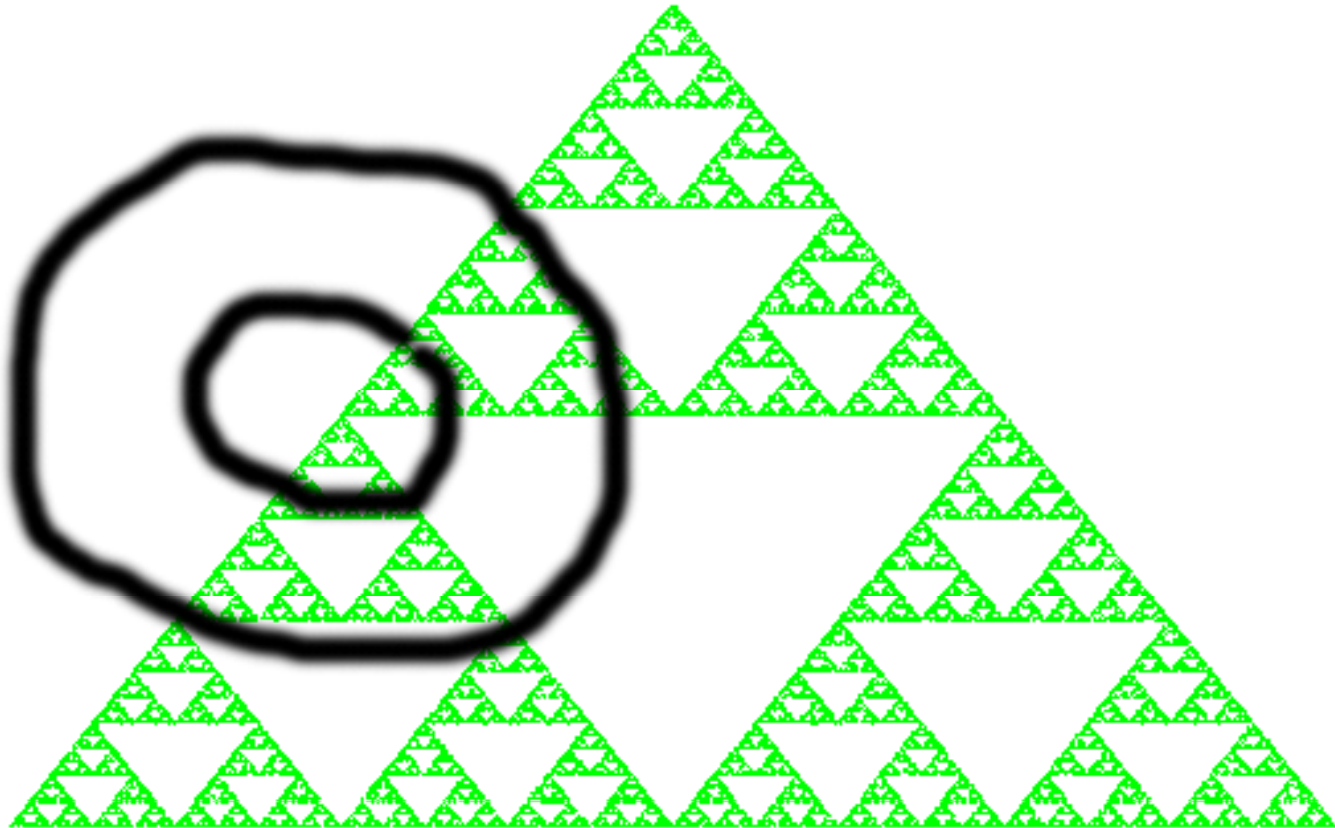

$N \propto R^2$ ; Dimension = 2

# Serpinski Triangle

$N \propto R^{1.585}$ ; Dimension = 1.583

$$D_q = \frac{1}{q-1} \lim_{l \rightarrow 0} \frac{\log \sum_i p_i^q}{\log(l)}$$

$$D_1 = \lim_{l \rightarrow 0} \frac{\sum_i p_i \log(p_i)}{\log(l)}$$

**Generalized form of fractal dimension; application of l'Hospital's rule for q=1**

# Review & Revision

- I. The “Scientific American” Test
- II. A Sequence of Practice & Revision
- III. Concrete Visualization/Demonstration
- IV. Zooming In / Zooming Out
- V. On Equations
- VI. Know your Audience

1. Communicating to your audience why one should care about the outcome of your research is more important than communicating the results
2. Giving your audience opportunities to draw their own conclusions will help them to remember your talk
3. It's more important that a listener learn one new thing than it is for you to present a massive amount of results
4. A small amount of humor can be very helpful
5. An (uncomplicated) picture is worth a thousand words
6. Practice, (I know, it feels awkward, but do it anyway)
7. Cite your sources and thank your mentors/sponsors/colleagues/moral support/etc.
8. End your talk with “Thank You”, not “That’s All”

Thank you for your kind attention.
